

## David robinson

Thank you for accepting my comments on this SSEIS. The Kalama methanol is an abhorrent idea given the cumulative effects of past centuries of fossil fuel use. I'm convinced that the future of humanity rests on the ending of all fossil fuels exploration and infrastructure projects! That fossil fuels will have to be left in the ground. That a war time effort to replace fossil fuels with solar, wind and other infrastructure is necessary immediately to protect humanity from climate crisis! That anybody involved with this and other exploration and infrastructure projects now and into the future will be found in a future court of law to be guilty of genocide against humanity for failure to protect humanity from climate crisis!

I realize that the Department of Ecology is under pressure to cross all the t's and dot all the i's, but it's time to SAY NO to any further thoughts of allowing this and other fossil fuels infrastructure to go forward. There has not been any true cumulative effects analysis for fossil fuels in the past and any future analysis should remain locked up and shelved given the scientific information already available on the effects of the use of fossil fuels on the climate to date! This and similar projects have to cease immediately and regenerative energy projects given the highest level of priority. For the future of humanity, denying this fossil fuel infrastructure will be a step in the right direction. Thank you for accepting my comments today.
