

Debra Byrd

I oppose the Goldendale Energy Storage Project. We need to think about the future, not just another avenue to create jobs at the cost of the damage these projects do to the land. You have an important decision to make on behalf of the environment, but the environment cannot advocate for itself. We all have to sit back and hope/pray that decisions are made for the long term, unfortunately we may see the beauty of the land's sacrificed for a few jobs.
