

Alex Bradberry

This is a poorly revised draft of the environmental impact statement that does not solve continuous flooding issues in the area. Instead, this dam will exacerbate existing habitat issues for resident species within the basin. That \$2 billion dollars could easily be used to raise homes and businesses, elevate roads and bridges, and invest in natural infrastructure upstream to reduce flood volumes. Please go back to the drawing board and review the multiple local-action non-dam alternatives that are more likely to be successful, holistic solutions to the ongoing habitat issues in the county.
