

## Alice Flegel

I live very near the Chehalis River. The wildlife here is incredibly diverse. The Chehalis River Basin must be protected.

The way I see this revised draft EIS is that the probable significant adverse impacts of building this dam far outweigh the benefits.

It is unconscionable to me that cultural and tribal resources will be significantly adversely affected as well as all the other study areas:

- Air quality
- Earth
- Fish, Wildlife and Habitat
- Water and Wetlands
- Transportation
- Recreation
- Public Utilities and Services
- Environmental Health and Safety
- Environmental Justice
- Noise and Visual

This list is quite enough to make me weep at the thought of losing so much! My comment is to emphatically deny approval of this dam. This dam should not be built, it is too destructive to all the areas listed above.

Thank you Department of Ecology WA for your diligent work on this project.
