

## Rick Goble

I support the Chehalis River Basin Flood Control Zone District's proposed flood damage reduction project for the Chehalis–Centralia area, including construction of a flood retention facility and temporary reservoir near Pe Ell and planned improvements to the Chehalis–Centralia Airport levee.

Recurring flooding has had significant and lasting impacts on residents, schools, businesses, agriculture, and critical infrastructure throughout the basin. A comprehensive approach that combines upstream flood retention with targeted levee modifications represents a thoughtful, science-based strategy to reduce risk while protecting downstream communities.

I appreciate the emphasis on long-term flood resilience, coordination among local and state partners, and continued consideration of environmental impacts and community input. This project is an important investment in public safety, economic stability, and the future viability of communities in the Chehalis River Basin.
