A dam won't stop major flooding long-term, but it will destroy irreplaceable habitat. The DEIS clearly lays out the reality that this dam will have catastrophic impacts. Our community deserves real flood solutions, not a project that harms wildlife and wastes public dollars. The Chehalis supports salmon, elk, birds, steelhead, lamprey, beavers, otters, entire food webs... all at risk. Restoring floodplains, strengthening local infrastructure, and investing in resilience are smarter, safer, science-backed options. Don't persist on a bad plan, just because it's what's in front of you.
