

## Janet Moser

Please do not move forward with this dam. It would significantly damage one of the last free rivers in Washington. While it won't prevent flooding on a long term basis, it will destroy habitat that cannot be replaced. Salmon and other indigenous wildlife are already struggling. Tribal rights are just as endangered. Let's work for real solutions which protect the flora and fauna and do not waste public monies. There are better solutions out there now. Please work with the conservationists and tribal members to find them.

Thank you.
