

Deborah Turner

This proposed dam project on the upper Chehalis river would cause harm to salmon and steelhead runs based on the DEIS. The area where the dam is proposed is a key spawning area that would be gone forever if the dam was built.

Also the cost and maintenance of the dam are a concern as well. There are also unresolved safety and geotechnical risks per DEIS.

Please consider flood reduction approaches as the local actions non-dam alternatives.

Thanks for your attention

Deb Turner
