

## Gary and Kerry Swain

Being homeowners on the Chehalis river, We have seen first-hand the potential damage to property and to human life. The incredible amounts of water that come through during the rainy season that change this little Meandering creek to a roaring possibly dangerous river are a scary sight to see. Plus Knowing of the past flooding and issues that occurred with that, We firmly believe there should be a flow through dam in the PeEll area as the project indicates. With that being said we also are happy to hear that the environmental issues such as the fish and other wildlife would not be Impacted with the construction of this flow through dam.
