

Ben Harrison

Flooding is a natural phenomenon and I do not support the construction of this dam. I understand that this is a flow through dam. However, it is clear from the review and mitigation plan that this dam would substantially alter the upper Chehalis and very likely remove/damage habitat that cannot be replaced through mitigation. The plan to modify the flood protection of the airport is will like need to be even more dramatic if a dam is not built and that more dramatic protection of the airport is a good alterantive in my opinion.
