Please listen: This damn is not a long term solution and it puts so much at risk. The Chehalis supports wildlife that would be in danger if this project goes through. I have always loved rivers. They aren't just running water. They have an effect on all life in many ways--ecologically, certainly, but also culturally, spiritually and ancestrally as well. This project will only waste money, harm wildlife and won't solve the problems. I am not an engineer or a scientist by any means, but I know there are better ways. Please explore them. They are there.
