

Andrew Halverson

I am strongly opposed to any dam being built on this river, the ecological impacts a dam would have far more damaging effects than any flood mitigation it might help. I also frequently recreate on the very stretch of water the dam would be built on. Fish spawning grounds (the intact riverbed upstream is very important for Chinook salmon) that lie in the footprint of the dam's reservoir are vital. Please don't destroy what would take centuries to rebuild .

Thank you
