

## Keith Palmer

This is the worst idea for "water control" so far. This makes no sense and will only create unrepairable damage to the forests and the soil as well as the fish. In a year of amazing dam removals like the Klamath (4) in Pennsylvania (27) Virginia removed (7) Minnesota (7) the Keweenaw Dam in the Washougal River Watershed Washington State wants to build a dam? Instead of wasting taxpayer's dollars on a dam that will provide more negative benefits than good, how about spending our money on removing negligent or unneeded dams? Specifically the Skookumchuck Dam which is no longer needed by Trans Alta.
