

Thomas Jacobs

I am not sold that this flow through dam is the answer. More effective, less damaging flood-reduction approaches already exist, including the Local Actions Non-Dam Alternative. I urge Ecology to pursue these solutions instead of the proposed dam.

Salmon and steelhead runs are already in danger plus no mention has been made about the lamprey eel.

We cannot continue to disrupt the ecosystem. I went to high school in Chehalis. I swam, floated and fished in the Chehalis River. Look at better alternatives.
