

## Erin McRae

Please reconsider your plan to allow the billion-dollar-plus mega-dam to be built on the Chehalis River. Not only is it prohibitively expensive, past experience with such dams has shown that they negatively affect fish and wildlife and communities that depend on them. They can also further negatively affect ecosystems that humans, wildlife, and our habitat depend on. Please instead consider alternatives that will keep these ecosystems and communities safe, and will be far less expensive than the proposed dam. Thank you.
