

Amber Floyd

There have been many successful salmon habitat restoration projects on the west coast in recent years, but in addition to recovering habitat that has been degraded, we also have to make sure we are protecting what is still healthy. Please oppose the construction of a new mega dam for flood mitigation on the Chehalis River. There are better non-dam alternatives available that won't come with a staggering loss of the salmon that Tribes and Southern Resident orcas rely on. The environmental issues we're facing can sometimes seem overwhelming these days, but this is a fight that many people care about!
