I request a public hearing.

WA state "Officials" Cannot be trusted. They're removing Clean Green energy producing dams, spending Billions to half ass replace them and our rates are going up with every misstep.

- \$351,000,000 to remove 28MGw from the grid and mitigation of Elwha & Glines Dams
- \$8.5m + another \$2.7m (coming up) to study removing another 3000MgW of clean power from the grid. The Federal government withdrew from the previous agreement to remove the dams.

\$1,217,200,000 is projected to be spent to Remove & Replace the power the Lower Snake dams generate.

TransAlta paying to upgrade to Natural Gas will be payed for by rate payers with increased costs
BUT

WA law states all electricity sold to retail customers must be 100% renewable or zero-carbon by 2045 - This should be a non starter

Conclusion: Wasted Taxpayer money spent - I say NO, start over with a common sense approach
