

Bob Guenther

I believe we should permit the unit 2 power plant at Centralia to convert to Natural Gas fuel. As a governmental affairs employee of IBEW 77 for many years I advocated for the conversion to Natural Gas.

We have a need for the electrons to be provided for the grid, we know we are short on generation the natural gas plant would help make up for the shortage until sources of clean energy comes on line for the grid. I feel we should have had a NG plant at Centralia online by now in order to offset the loss of generation due to the shutdown of the plants using coal as fuel. the 2011 legislation allowed for NG as a alternative fuel.
