

Michael Thomas

I support TransAlta's conversion to natural gas. Knowing Centralia's need for electricity, jobs, and the community's desire for appropriate natural conservation, the conversion to natural gas is a good intermediate step away from coal. Ultimately, conversion of the site into a location for nuclear small modular reactors (SMR) technology would be most beneficial. However, natural gas does provide a means to continue plant operations (jobs), provide electricity, and to protect the environment. Thank you. Sincerely, Mike Thomas
