Donald Trump is exercising his wasteful power in this situation. He is using his position to effect state action to make people believe using coal as energy is cleaner and better than natural gas. Out of the options I suggest it should be transformed into a natural gas power plant rather than coal. Natural gas produces 50% to 60% less carbon dioxide than burning coal and natural gas has better efficiency rates. There is no reason to not replace the coal, if you want to complain about the money maybe stop sending millions and billions to Israel and focus on your own country.
