

Marc Ventura

Can you please clarify the math of the cost per category?

For example, under Category 1, the fee per participant is \$104,195. If I multiply by 13, I get \$1,354,535 not \$1,334,597.

Under Category 2, the fee per participant is \$29,770. If I multiply by 13, I get \$387,010 not \$381,313.

Under Category 3, the fee per participant is \$14,885. If I multiply by 13, I get \$193,505 not \$190,656.

What am I missing?

Also is it coincidental that all three categories have the same number of participants or is it intentional?

Thank you for your explanations.
