I strongly opposed any law geared towards climate change. All of these laws have made it harder on families financially and limited industry resulting in less jobs available. For every one carbon footprint you aim to reduce, China creates 10 more. Laws like this are why so many people are fleeing this state. Only the gullible ones remain. I have watched this state go down the tube and the debt used to be \$1 for every person, now....and all in the name of climate change. How many kickbacks are you all getting to pass these laws? It's the same song and dance - this is for the "health" and "safety" of people and land. But at the end of the day, your pockets getting bigger and we get poorer. Stop passing laws that just hurt industry and increase cost on families and focus up on the real clean up of WA state: Midnite Mine, Hanford, etc. Also, all of the tent cities, tax funded safe injection sites and healthcare, etc. Clean up the streets and actually lock up and punish criminals!!!! Once you clean up the filth and crime then focus on other things. Wa needs to start following the national regulations for business in our state
