

Valerie Wade

With health surveys showing people living next to major highways are sicker than everyone else; to climate change happening and now very evident, it is time to require large trucks and similar vehicles to be manufactured with cleaner engines!! We need to reduce the need for diesel fuel, a big pollutant. We need to have these vehicles available for purchase by 2035. We need the vehicles affordable for companies (while still producing a profit for the manufacturer as an incentive). We need laws to enforce this or it will never happen. ---Valerie Wade
