

Linda Cohan

Thank you for taking comments. My comments are more general than specific. My family has purchased a PHEV so that our local driving is not contributing to our local air pollution. I would like the state to help families of all incomes to trade in their 100% polluting vehicles for, at a minimum, hybrid vehicles which would immediately improve our air quality, and save them money. Along those lines, for folks living in apartments, the state needs to provide many more public charging places. I encourage Washington State to continue to do more to combat climate change and to electrify our energy sources, especially in light of the federal government's refusal to do so!
