

Glenda Carper

Dear those at the Dept. of Ecology,

I urge you to provide ways not only for all people to be able to use electric vehicles in the future but to make our public transit electrified. I no longer am able to drive a car so I ride the bus and link light rail. Maybe I will take the train again. I rely on Metro Transit for electrified travel to help reduce the production of carbon. We need more cross city transit in Seattle and it would be terrific if there could be some shuttles by electrically powered vehicles within areas such as Northgate where I live. They had done this in Burien in the late 2000"s. Thanks for working to fill in the gap that the Federal government has imposed on our state. Glenda
