

## EDGY LLC (jim soules)

I just finished a 3 one-bedroom zero energy infill project in Langley, WA. See attached. An important issue is providing residential chargers. Because on my PSE application I mentioned three chargers it cost me many thousands to pay for the upgrade of the transformer that served me and 3 other homes. I was told later if I hadn't mentioned the chargers on my application I wouldn't have been charged, but after service installed there would be no charge to add chargers. Need to facilitate provision for chargers especially for infill development like mine.  
And facilitate provision for enough solar to charge vehicles - like mine.
