One barrier to greater EV adoption is at-home charging. I live in a 10-unit, 50 yr old apt building. In order for any of our residents to have an EV, we'll need to invest heavily in upgrading the building's electricity infrastructure and make it possible to route a charging station to each unit. This is a huge burden on a small HOA that already faces many challenges of an aging structure. I hope you will consider incentives or support to encourage buildings like mine to go EV!
