Re: Resolution/Fracking

Dear Ms. Mason:

Attached please find a copy of the revised Resolution regarding fracking. Please advise if you would like me to make any modifications.

Very truly yours,

Jeffrey P. Garton

RESOLUTION
Doylestown Township, County of Bucks
Commonwealth of Pennsylvania

WHEREAS, a fundamental purpose of government, including the Township of Doylestown, Bucks County, Pennsylvania, is to protect the health, safety, and welfare of citizens; and

WHEREAS, Article I, Section 27 of the Constitution for the Commonwealth of Pennsylvania affirms that, “The people have a right to clean air, pure water, and to the preservation of the natural, scenic, historic, and esthetic values of the environment”; and

WHEREAS, Article I, Section 27 further declares, “Pennsylvania’s public natural resources are the common property of all the people, including generations yet to come. As trustee of these resources, the Commonwealth shall conserve and maintain them for the benefit of all the people”; and

WHEREAS, in the most recent statistical analysis of the body of scientific literature by the Concerned Health Professionals of New York and Physicians for Social Responsibility, 685 peer-reviewed papers examining gas drilling and/or hydraulic fracturing (“fracking”) were reviewed, and the overwhelming majority of studies found evidence of or potential adverse impacts on water, air, and human health¹; and

WHEREAS, the negative impacts of shale gas development are documented by the Pennsylvania Department of Environmental Protection’s accounting of 295 private water well contamination cases that were determined by the agency to have been caused by oil and gas operations²; and

WHEREAS, the United States Environmental Protection Agency’s (EPA) most recently released fracking study provides scientific evidence that fracking activities can impact drinking water resources, and that includes water impacts from shale gas in the Pennsylvania community of Dimock³; and

WHEREAS, there is significant evidence that shale gas development, and its related operations, which include all the phases of the fracking process from the first stage of industrial land preparation; to the storage, handling, and use of chemicals and additives for extraction and stimulation; to drilling and fracking; to the withdrawal of and degradation of large volumes of

water and its discharge and disposal as waste, has adverse effects on public health, property interests, agriculture, and on the air, water, and land⁴; and

WHEREAS, neither the Commonwealth of Pennsylvania nor the Delaware River Basin Commission has conducted a comprehensive assessment of the cumulative and long-term impacts of fracking and related shale gas development activities on the water resources of the Basin; and

WHEREAS, the absence of such an assessment prevents the appropriate management of and avoidance of degradation from the harms associated with shale gas development, including risks to public health, property values, and the clean air and water upon which all citizens and businesses depend⁵; and

WHEREAS, the shale gas industry has received unprecedented exemptions from our nation's most important environmental and public health laws, including the Safe Drinking Water Act, Clean Air Act, and the Clean Water Act; and

WHEREAS, after exhaustive study, New York has prohibited high-volume hydraulic fracturing, and Maryland has prohibited all fracking in their states⁶; and

<http://thinkprogress.org/climate/2015/05/29/3664098/larry-hogan-maryland-fracking-ban/>

WHEREAS, shale gas development in the watershed has highly significant cumulative climate impacts. Natural gas is primarily methane, a greenhouse gas 86 times more efficient at trapping heat than carbon over a 20-year time frame,⁷ and its effects persist for hundreds of years.⁸ The well documented vented and fugitive losses from natural gas systems contribute to atmospheric warming, but current technology and practices have not controlled these releases. The emissions from shale gas development are so great that it is projected that their release from the build out of Pennsylvania's Marcellus shale will prevent the achievement of global warming goals in the state, accelerating climate change.⁹ Climate change impacts on the basin's water resources include changes in precipitation and runoff that increase flooding and drought, impairment of habitats and water quality (including salt water intrusion to Delaware Estuary water supplies), and sea level rise¹⁰; and

WHEREAS, the Delaware River Basin Commission has in place a moratorium that currently prohibits all natural gas development, including drilling, fracking, wastewater processing and discharges from and water withdrawals for drilling and fracking operations, throughout the Delaware River Basin; and

WHEREAS, Doylestown Township supports the continuation of these DRBC prohibitions; and

WHEREAS, the Delaware River Basin Commission is actively considering draft regulations that include the possibility of "prohibitions related to the production of natural gas utilizing horizontal drilling and hydraulic fracturing within the Basin," but may include the allowance for "...storage, treatment, disposal, and/or discharge of wastewater within the basin associated with horizontal drilling and hydraulic fracturing for the production of natural gas where permitted" and "...the inter-basin transfer of water and wastewater for purposes of natural gas development where permitted"; and

WHEREAS, Doylestown Township considers that the weight of evidence shows that natural gas development and its operations cannot be done safely and/or without degrading the exceptional water quality of the Delaware River and tributary streams.

NOW, THEREFORE, BE IT RESOLVED that:

Doylestown Township calls upon the Delaware River Basin Commission to continue the moratorium that currently prohibits all natural gas development, including drilling, fracking,
