On the CCWA board, ~~citizen of PA~~, resident of Durham Township,
Live on Cooks Creek that is part of the Delaware River Watershed/Basin,
As a member of CCWA board we have many activities to educate our ^{members + children}
water ~~appreciation~~. One activity involves a ^{science} model of ^{water}. Looks like a fish tank
with wells, landscaping and a view of the groundwater.
In the model one can see ^{how they} pollutants are added ~~and~~ how they travel
through the groundwater. The color in the water injected shows up in the
groundwater. A real visual model for educational purposes.
Today, I ask that the DRBC places a complete ban on
fracking and its related activities throughout the Delaware River Watershed

Including a plan for the storage, processing & discharge of black wastewater and the export of Delaware River watershed water to fuel fracking elsewhere.

Our water is of the highest consideration.

Durham Township has wells that can be contaminated if there is contamination in our "mother watershed" recreational. Our water is for drinking, as well as economic importance. The River is our backyard playground - we hike along it, fish in it, swim in it.

We notice when there is a drought; when there's a flood.

I'm not a scientist but as a human being I usually see in my mind the devastating effect of pollution ^{contamination} on our water. Let's put the human race first, not the industry.
