

Sydney L. Waller

I am totally opposed to any more dangers to the precious Delaware River Basin. Over 15,000,000 people rely on the waters of the Delaware River Basin for drinking, agricultural and industrial use. In 1961, President John F. Kennedy and the governors of Delaware, New Jersey, Pennsylvania and New York signed a compact with the force of law to create a regional body--the Delaware River Basin Commission--to manage the Delaware River and the land through which it runs. It was the first time the federal government and a group of states joined together to oversee a river basin.

His legacy, and the health of the people, are threatened. Please take your responsibilities seriously, and do NOT allow companies to store, process, and discharge toxic fracking wastewater into the Delaware River Watershed. Do NOT permit our precious water to be exported from the basin for fracking elsewhere.

Protect the people, do NOT give the appearance of pandering to corporations.
