

Molly Rearden

To whom it may concern at the DRBC

My name is Molly Rearden. I am an 18 year old resident of Pennsylvania in an area that will be affected by possible fracking in the Delaware River. I have learned about the negative affects fracking has on the community that surrounds it in my environmental class. As a young person, The health of the earth and my community greatly concerns me as I plan to live a long healthy life and would like a healthy earth to pass down to future generations. Fracking negatively influences important things such as drinking water for many people, the wildlife, and the atmosphere. Fracking will promote a sharp rise of greenhouse gas emissions. Focusing on fracking will only set back the search for a real clean source of energy. Make the right choice and ban fracking in our beautiful community
