

Richard Faulkner

I spend about 30 day's every year fishing thr upper Delaware. In my opinion it is by far the most valuable river system West of the Rockies. Fracking in many ways has significant unknowns. What we do know is clean water is as essential as clean air. We also know once a resource is damaged the repair/recovery period will probably take decades to right. The ongoing cleanup of the Hudson is a excellent and ongoing example. In my opinion it would be most unwise to risk this resource in any way.
