

Henry Berkowitz

Why is this state so willing to accommodate the fossil fuel industry at the cost of worsening health for its residents? Fracking and its associated activities should be banned everywhere. At the least we should demand that the industry find other chemicals that are not poisonous to everyone's health, to replace those that are, and ban all fracking until they do. Meanwhile what happens to the radioactivity that comes out of the flow back from fracking? Not much talk about that and its accumulation in our streams. Will you ignore that issue? The industry takes our water, poisons it, and then thinks it is OK to return it in that state. Whose side are you on? I guess your decisions will tell.
