

Jennifer perlaki

The Delaware River Basin is an environmental treasure that's under threat from fracking and pipelines and we must have a permanent ban to protect it. It is the largest river on the eastern seaboard. This environmentally sensitive area supplies clean drinking water for more than 17 million people.

I support banning fracking and I also do not want fracking waste to be dumped here either. The Commission must do their job to protect the drinking water for millions of people.

Thank you,
Jennifer Perlaki
