

## Ed Parleman

Please add the following to your draft regulations: prohibit the exportation of water for fracking, and the importation of fracking wastewater for treatment in the basin.

Though I no longer live in the area, I grew up in South Jersey, and hope you will protect the valuable resource that the area's water is. As far back as Wharton's time in the 1870s the government has had to protect the water supply; please continue to do all you can to protect it for the future.

No more PA communities need to be able to light their kitchen faucets on fire.

Thank you.
