1 I want to urge the Commission to consider the scientific 2 data, the available studies, both state 3 4 and federal regulations and also 5 industry best practices and the 6 significant technology and engineering 7 advancements in this industry that make 8 safe and responsible development 9 possible. We have seen it work across 10 the Commonwealth and all over the 11 nation. We can have safe and 12 responsible development in the Delaware 1.3 River basin as well. 14 HEARING OFFICER: 15 Okay. Thank you, ma'am. 16 All right. Jeanne Cimorelli would be 17 next, and then Jodi Roggie and then 18 Beth Kelley. Okay. Jeanne Cimorelli; 19 is that right? 2.0 MS. CIMORELLI: 2.1 Yes. 2.2 HEARING OFFICER: 23 Okay. Ma'am, please. 2.4 MS. CIMORELLI: 25 Good afternoon. My name

is Jeanne Cimorelli. I am a lifelong resident of Orange County, New York and I made a special long trip to be here today to speak to you guys.

I'm a regular visitor to the Delaware River. I'm an avid outdoor person, be it kayaking, I'm a wildlife enthusiast, bird watching, an arborist and photographer. And I visit the Delaware River all the way from north, all the way to the Delaware Bay to the parks that are down there.

Back in January, I
attended one of the Commission's public
hearings and I listened to comments
from both sides of debate, statements
ranging from save the environment,
protect water to don't tell me what to
do with my land and you're
overreaching. And I sat and I listened
and in today's political climate, I
said, what is the common denominator?
What's the common ground between these
two sides?

And I came up with one

thing, and that one thing is the river. Even people who supported fracking on that side, they said, hey, now I'd be the first one to tell you, I don't want to see anything happen to the river.

and the preservation of the river is one common ground between both sides.

Nobody wants to see anything happen to it. From what they said on the other side, on the pro fracking side, they said don't tell me what to do with my land.

They wanted to be able to sell rights or whatever. That to me is --- is --- that would benefit just a small number of property owners. If something were to happen with that storage, wastewater, byproduct storage of fracking hydraulics, it would be the municipalities and our first responders and the resources.

So while a few people may benefit from a monetary gain, it's going to be many people that have to

support the cleanup.

And to me, it's not a matter of if, it's a matter of when, because things do fail.

So in closing, I'd like to say that we here on the east coast have an abundance of water and I don't want the Commission to be complacent by thinking --- by not giving due respect to this valuable asset we have, this precious asset of clean water.

Many people on the west coast and drought-stricken countries would agree that you should do your best to safeguard this precious river and this precious asset that we have.

So to that end, I would urge you to continue to ban fracking and also a ban on any wastewater storage, byproduct storage and therefore, really most anything that could absolutely threaten this precious, precious clean water that we have. Thank you.

HEARING OFFICER:
