

Jay Parrish

I could repeat the many arguments against allowing fracking in the the Delaware River Basin. But you have heard it and you will either accept or reject them. Let me instead say that I had the privilege of being the State Geologist of Pennsylvania as well as the Special Assistant for Science to the Secretary of DEP. I have also worked for Mobil Oil. If you can prevent fracking in the basin you will be doing well by the citizens you represent. The damage could be extensive, as we have seen. I urge you to not allow it.
