

Kirstin Haggard

When I say that I am from NJ, I always clarify that I am from the "Delaware River side", even though I now live near Sandy Hook. That river is home in my heart, just like it is still home and water source for millions of people, plants and animals. It is our responsibility to protect it from hydraulic fracturing (fracking) and all of its byproducts. Please remove all language in the proposed legislation that would allow fracking in the Delaware watershed, allow drawing water from the Delaware for the process of fracking, or allow the release of wastewater into the Delaware watershed.

Thank you for your time and attention.
