

## Cynthia Westerman

I definitely support not allowing fracking in the Delaware River Basin. This basin is too important a water source to allow it to become polluted by fracking. Also the drilling and accompanying industrial process will spoil the basin for the many people who use it for recreational activities. There have been too many pristine places already spoiled in PA and other states by fracking. Please keep this resource as clean as possible.

I also support not allowing water withdrawals from the Delaware basin for purposes of use in fracking. The water there is an important source of drinking water for communities down stream. In periods of drought, taking water from the river will also destroy recreational activities.

Finally I understand you now allow dumping of fracking waste with the basin. This should also be banned with your ban on actual fracking. The Delaware does not need any more sources of pollution.
