

Kathleeb Thomas

In reference to the following draft regulations

Special Regulations Part 440 - Hydraulic Fracturing in Shale and Other Formations.

Revisions to the Commission's classifications for project review set forth at 18 CFR 401.35

Revisions to the Commission's regulatory program fees set at 18 CFR 401.43

Guidance for Determining Background Concentrations in Surface Waters

In addition to banning fracking in the Delaware river basin please also ban all activities relating to fracking natural gas. This would include waste water injection and disposal and also the withdrawal of fresh water for use in the fracking process in addition to prohibiting the transport of Fracked gas through this area for any reason.

Everyone must realize by now that fracking gas causes permanent damage that cannot be reversed to land, air, & water. To put these fragile & precious resources at risk to line the pockets of the gas & oil moguls & the politicians & all who profit from this process & use - is unthinkable.

Please stand up against this threat to our environment & to our very sustainability.

Thank you

Kathleen Thomas
