

Richard Connelly

No gas and oil exploration or mining project is completely safe in terms of potential water pollution effects. The safeguards promised are only short term. It's not will they fail it's when. This has been demonstrated time and time again. Once the damage is done going back is never possible. Those problems will haunt those communities forever. The short term economic gains are not worth the cost of clean up and losing these resources. We need clean water and places for our children to drink and enjoy recreation, more now than ever. Please do the right thing in controlling fracking effects.
