

Ruth Zowader

Please ban fracking in the Delaware River Basin. Fracking is not sufficiently understood to ensure that it can be done safely. And once done it cannot be undone. NJ already has a surplus of superfund sites. Allowing fracking water to be put into our water supplies makes no sense and is likely to result in more pollution. Let's be safe rather than the sorry we already are after all the times we allowed unknown technical damage to happen. Let's avoid the mess we had at Tom's River, by fully understanding what is proposed and setting rules and regulations on fact and not fiction. this is another accident waiting to happen. Please stop the fracking in the Delaware River Basin.
