

Jason Schulman

It is necessary to permanently ban fracking and save the Delaware. It is one of the last pristine rivers on earth and provides 5% of America's drinking water. As it stands, the proposed regulations do not fully protect communities from the impact fracking has they still allow for the exportation of fracking wastewater from the Basin to fracking elsewhere AND the importation of wastewater for treatment into the Basin.

This simply isn't good enough or safe enough. It's time to ban fracking, period.
