

## Teresa LoPorto

Fracking pollutes water. If you allow Delaware River Water to be used for fracking it will be polluted. Are you sure it can be 100% cleaned before it is discharged back into the environment?

We have passed peak oil & at some point will necessarily have to wean ourselves from dependence on its use. It is better to have to wean our lifestyle off of oil while we still have clean water than to have to wean ourselves off of oil after we've polluted the water too.

If you are desperate for the income that would be generated by fees associated with fracking, I assure you the day will come when even the addition of those fees to your budget will not be enough to keep you financially solvent.

The time to solve our community's oil addiction and your financial woes is now - before our water is polluted too.
