

Lisa Gross

I urge you to vote against any phase of fracking to be introduced and allowed in the Delaware River or Delaware Basin. With the fracking fluid being proprietary information, we have no idea what chemicals are in the produced water. All phases of fracking for natural gas are dirty, from extraction to transporting it. The methane is not clean, it is worse than CO₂. Why would we allow such unknown chemicals to be disposed of in our beautiful Delaware River? With the known scientific facts of climate change and the unfortunate direction our country is going, policies that are sending us into catastrophic events in our future by going full steam ahead with fossil fuels, your decision on this matter to vote NO on any phase of fracking can bring hope for all of us. We need to stop pouring money in this obsolete method for energy. I plead with you to vote for our future, our environment, the people over profit and deny any phase of fracking in any form in the Delaware River and Basin.
