

## Nanci' Di

Please end Hydraulic Chemical Fracturing. It ruins lands by infiltrating underneath ground water lines from unground tributaries.

Chemical run-off pools are also detrimental to public well water, cattle, bees, crops, and poses health threats to humans directly from tap water which if match lighted will flame from fracturing chemical pollutants.

Also, most if not all Natural gases are being sold to China, France, Russia, and is not primarily being used here in the U.S.A.

Stop selling American Lands for Resources, stop buying up & selling Farms to fracture and for other resources.

End Chemical Fracturing/Fracking in the Delaware River & Nationwide.

It's NOT smart, (are these people thinking?)
