

Mariagnes Delia

Please protect the Delaware River a precious resource for fresh clean drinking water, habitat for aquatic life, and a beautiful scenic waterway. The consequences of fracking are becoming known hazards to water systems of nature. And all consequences aren't know. But it is obvious that pumping dangerous chemicals (many hidden from the public) into our land is a stupid,dangerous procedure. Protect our land and water for us and our children's children. We have no right to destroy it for short sighted greedy reasons.
