I am asking the DRBC to ban fracking and also ban fracking waste transport, treatment, and disposal in the Delaware River Basin. Please do not permit Delaware River Water to be used for fracking. Fracking poisons the water that my family and 17 million other people need - permanently. There is no way to remove fracking toxins from "produced" or waste water; it cannot be used to "salt" roads or for any other purpose. Please do not allow corporations to enrich themselves by poisoning the water we and future generations drink. I will appreciate a response to my concerns. Thank you for your attention to this critical matter.
