

Lynn Macy

Please as Americans we MUST protect the waters of the Delaware River Basin. It is essential to life on this planet! Wildlife and as well ad human life could be adversely affected by the pollution created from Fracking. Dangerous chemicals should NOT be introduced into our waterways. We are awash in industrial chemicals already and the PEOPLE of this country have a RIGHT to clean air and clean water. We have an obligation to pursue other clean sources of energy and not FRACKING which has already been PROVEN to be destructive to wildlife, eco systems and drinking water. Human beings must conserve our limited water resources.
