

## George Billard

The time is over for half-measures. It is time to ban not only fracking in the Delaware basin, but also stop the use of our precious water resources for gas extraction and to ban the disposal of fracking waste. We only have one Delaware River. Its health is paramount, as is the health of the people who live here and those elsewhere that depend on its water. The DRBC must act now. Residents and future generations will thank you.
